

Agriculture: Grape Pest Management Guidelines

Postharvest

This year-round program section covers the major pests of table grapes grown in California. For wine and raisin grapes, see the [WINE AND RAISIN GRAPE YEAR-ROUND PROGRAM\(/agriculture/grape/wine-and-raisin-grapes-postharvest/\)](#).

About Postharvest

- [Mitigate pesticide effects\(/agriculture/grape/wine-and-raisin-grapes-pesticide-application-checklist/\)](#) on air and water quality.

What should you be doing during this time?

Continue monitoring for [vine mealybug\(/agriculture/grape/Vine-Mealybug/#MANAGEMENT\)](#) on fruit and foliage.

Treat if needed according to the Pest Management Guidelines.

If vine mealybug is present, steam-sanitize equipment before moving to uninfested areas.

In the San Joaquin Valley look for [European fruit lecanium scale\(/agriculture/grape/European-Fruit-Lecanium-Scale/\)](#) on leaves.

Treat if needed just before leaf drop, according to the Pest Management Guidelines.

Continue to mark and remove vines infested with diseases such as:

- [Pierce's disease\(/agriculture/grape/Pierce's-Disease/\)](#)

Carry out sanitation activities and vine surgery for trunk diseases well before the first fall rain event:

- [Botryosphaeria dieback\(/agriculture/grape/Botryosphaeria-Dieback/\)](#)
- [Eutypa dieback\(/agriculture/grape/Eutypa-Dieback/\)](#)
- [Esca\(/agriculture/grape/Esca-Black-Measles/\)](#)

Continue to monitor for [western grapeleaf skeletonizer\(/agriculture/grape/Western-Grapeleaf-Skeletonizer/\)](#) on early harvested varieties.

In the Coachella Valley, sample for [nematodes\(/agriculture/grape/Nematodes/\)](#) in October if not already done in spring.

Check sticky traps for [glassy-winged sharpshooters\(/agriculture/grape/Sharpshooters/#MANAGEMENT\)](#).

Other pests you may see:

- [Grape thrips\(/agriculture/grape/Thrips/\)](#)
 - [Red-headed and green sharpshooters\(/agriculture/grape/Sharpshooters/\)](#)
-
